## Nikon Scan 4.0.2 Updater - Macintosh

### Nikon Scan 4.0.2 Updater - Macintosh

What is this? (scroll to the bottom for download link)

This is an updater to update Nikon Scan 4.0 (any version) to version 4.0.2 for Macintosh OS computers.

What's New?

1. Improved detection of the image frame area when using the SA-21 strip-film or SA-30 roll-film adapters. Applies to SUPER COOLSCAN 5000 ED, COOLSCAN V ED, SUPER COOLSCAN 4000 ED or COOLSCAN IV ED.
2. A problem which could cause the computer to freeze when inserting or removing a film holder from the SUPER COOLSCAN 9000 ED, has been corrected.

Compatible OS:

- Mac OS 9.1 or later
- Mac OS X 10.1.5 - 10.4.11

\*Note: Nikon Scan 4.0.2 updater is not fully compatible with Mac OS X 10.5.x. Connection and scanning may be possible, however electronic adapters may not operate properly; thus causing the software to crash.

What's included in the download?

**Nikon Scan 4.0.2 Updater for Macintosh**

Special Notes

- Exit Nikon Scan or any other application that may be running, and turn off all virus-checking software before proceeding with this upgrade.
- Your computer must be restarted after performing this upgrade.
- **After upgrading to version 4.0.2 the software version number will still be displayed as 4.0.0, however the correct version can be confirmed in the "Read Me" file which is located in the Nikon Scan 4 folder on the computer's hard disk.**
